

A sheet steel roof enhances the building

PRELAQ®

Information on Prelaq Nova PLX prepainted sheet steel for long strip and sheet roofing

SSAB
TUNNPLÅT

Ten good reasons for using

SSAB Tunnpåt is Swedish long strip roofing. Pretty good environmental

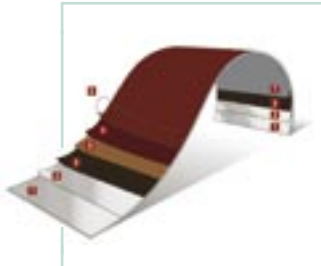

Adaptable

Prelaq Nova PLX is better suited than any other roofing material for long strip and sheet roofing if the aim is to achieve exciting roof designs and durable, attractive roofs.

Industrial production

SSAB Tunnpåt is in full control of every stage of production - from casting the steel slabs to the finished prepainted sheet. Production takes place under perfect industrial conditions. The result is a prepainted sheet of the highest quality - the best guarantee for a long useful life and cost effectiveness.

Several protective coatings

The sheet steel core is first given an anti-corrosion coating of zinc. We then apply a primer to the sheet. The primer has a two fold function - it improves further the anti-corrosion properties and it provides a good bond for the top coat of paint that gives the sheet its final colour.

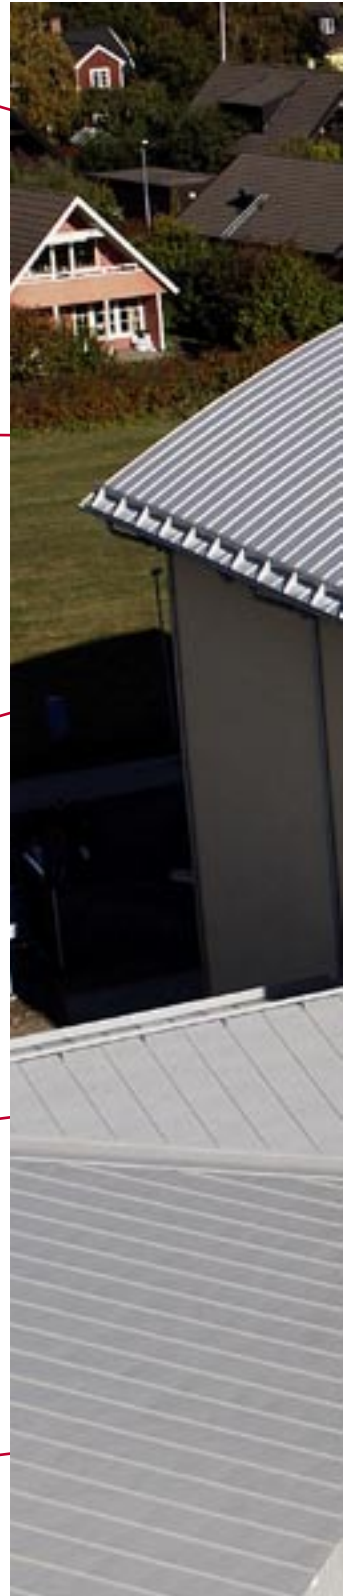

Environmental benefits

Prelaq Nova is the best conceivable choice from the environmental aspect. When the sheet steel is melted down at the end of its useful life, the only by-products are water and carbon dioxide. And the molten steel will revert to steel, since it is part of a perpetual cycle.

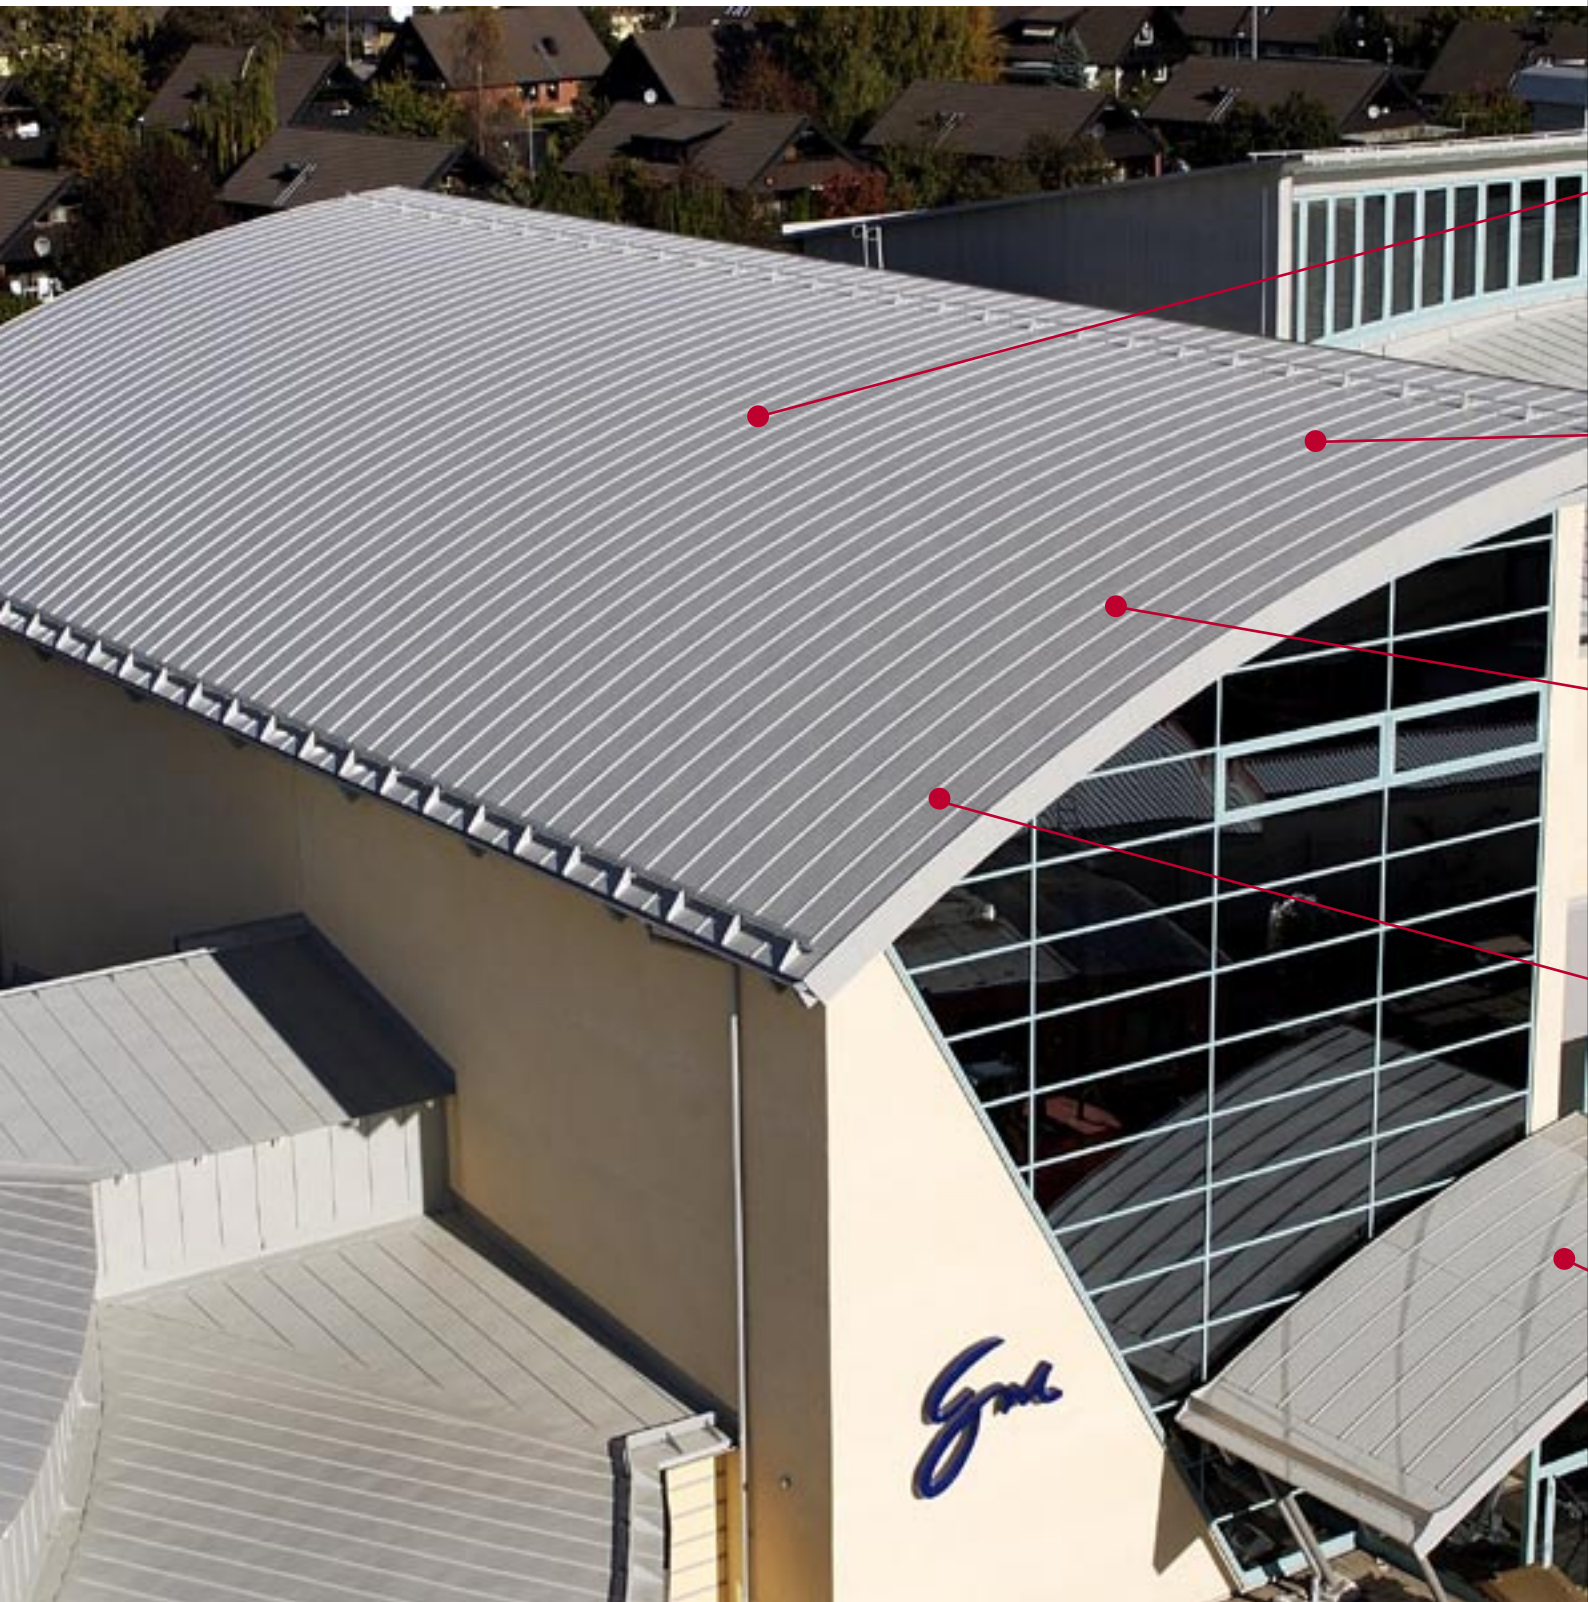

Matt or gloss?

Prelaq Nova is available in gloss and matt finishes. Prelaq Nova Matt is particularly well suited for long strip and sheet roofing.

low maintenance and
long life and modern.

Modern prepainted sheet steel

Prelaq Nova PLX is a modern paint system that is twice as thick as ordinary thin film paint systems. Prelaq Nova therefore offers particularly good wear resistance, better colour fastness and an extra long useful life. The specially developed mild steel enables the sheet to be machine folded and worked by hand even at low temperatures (-10°C).

Thin-film coat

Cost effectiveness and maintenance

A roof that is easy to service and has a long life span offers value for money. Maintenance is very simple - just rinse it with water. Repainting at some future date is just as simple - overpaint the old paint.

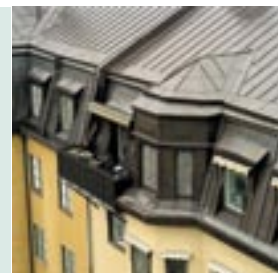

A more dependable roof

Prelaq Nova is covered by a 15-year guarantee. SSAB Tunnplåt has the entire process under full control - from casting the steel to delivering the finished prepainted sheet. The reverse side of the sheet is marked "SSAB Swedish Steel Prelaq Nova" and the batch number, for easy traceability. This marking is a stamp of quality.

Longer useful life

The longer the lifespan of a roof, the lower will be the long term cost. By specifying Prelaq Nova, you will be ordering prepainted roofing sheet steel of the highest quality and also with the best possible scope for a long useful life and cost effectiveness.

A variety of colours

Prelaq Nova offers the broadest range of colours available on the market. You can choose between numerous traditional colours and many new, exciting colours. The gloss version of Prelaq Nova is also available in silver, zinc and copper. So you can combine the broadest available range of colours with taste and imagination.

Attractive colours - good properties

Prelaq Nova has many good qualities, and you have the choice of many attractive colours. Some of them are illustrated below.

Easy to handle

Dependable

Attractive

Easy to maintain

Colour fast

Environmentally friendly

Excellent quality

Cost effective

Easy to work

Matt finish

Gloss finish

Good longevity

Do you want to know more?

SSAB Tunnplåt began producing prepainted sheet steel back in 1968, and was one of the very first steelworks in Europe to produce the product.

Industrial prepainting of sheet steel offers great quality and environmental benefits. The finished product leaving our plant is prepainted steel strip in a variety of colours. Prelaq Nova is used for long strip roofing, roofing tiles, guttering and facades etc.

Prelaq Nova has been developed to withstand the hard Nordic climate in which summers are warm and winters are cold. This provides Prelaq Nova with quality properties that will make the sheet highly appreciated and usable right down into southern Europe.
